Used Delec commentary system and Tellix intercom system available for sale

Pictures of the Delec commentary setup:

Technical specifications Delec Oratis triple commentary units:

Commentator terminal features include:

- Integrated talkback function
- Integrated foldback function
- Three assignable stereo aux signals
- Remote set-up over the network
- Remote control (technical assistance) over the network
- Redundant networking
- Failsafe fallback mix including cell-phone support
- Ready for intercom-module installation
- Phantom Plus for Noise Guard headsets (optional)
- Toggle Commentary / Translator mode
- BNC connectors for two LED gossneck lamp

Technical specifications Delec Oratis intercom system:

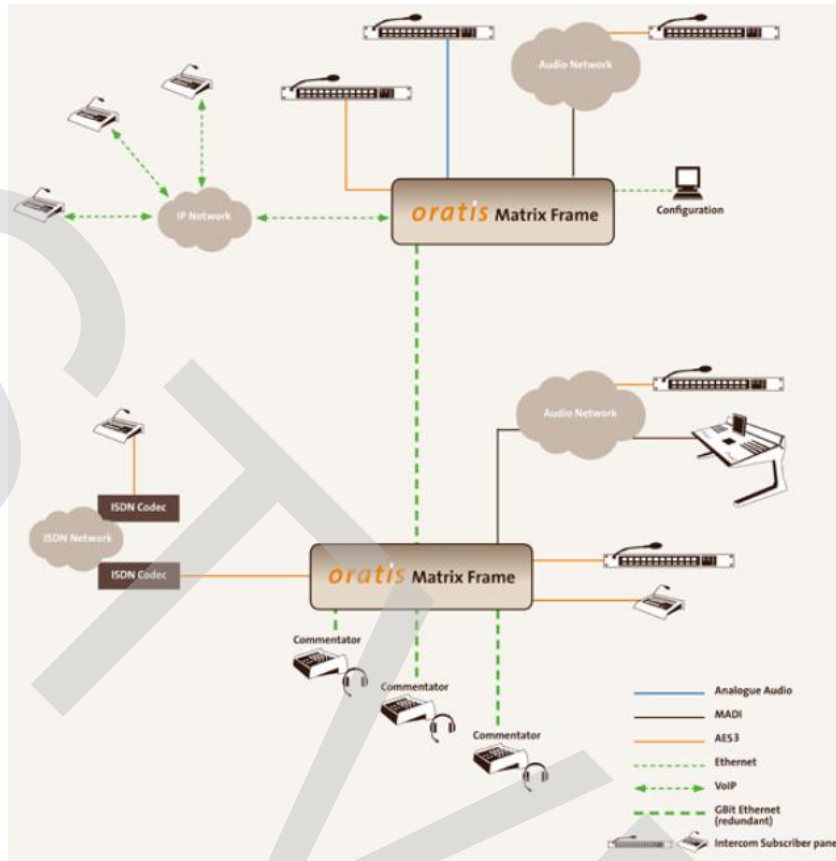

- All audio signals are converted with a 48 kHz sampling rate and 24-bit word width
- The internal resolution is 32-bit fixed point and the bus system is a TDM system
- The system consists of a matrix frame with I/O cards as well as microphone stations and commentator units connected via Ethernet
- The matrix offers the function of a fully summable audio matrix.

Software:

- The entire system can be completely configured and maintained remotely using software, both offline and online. The configuration computer, like the commentator unit, is connected via Ethernet.
- The configuration software allows not only key assignments but also logic links to be implemented, making the configuration options very comprehensive and flexible.
- A very interesting feature is that you can provide technical support to the commentator using the software from the control room (see photo above) or the OB van. If e.g. If, for example, a control was not pushed up or the microphone was not activated, this can be done remotely. The software also gives you control over what the commentator is currently doing.

Technical description Tellix intercom system:

The operating modules of the Tellix system are integrated into the commentator terminals and the necessary audio and control data can be exchanged with the OB van via the GBit network of the commentator terminal, so that no additional line has to be drawn to the commentator's position.
